Non-authoritative answer:

Name: google.com

Addresses: 2404:6800:4007:834::200e

172.217.26.110

1. What is the IP?
172.217.26.110
2. Why do we need DNS?
Remembering names is easier for us rather than the IP of all the websites.

2. Explain DNS in simple words

Domain Name System (DNS) When you type [google.com](https://www.google.com), your computer doesn't understand names — it only understands numbers (IP addresses). DNS translates [google.com](https://www.google.com) into something like [142.250.182.46](https://www.google.com) so your computer knows where to connect. Without DNS, you'd have to memorise IP addresses for every website.

3. List 3 common ports and their use

Port	Protocol	Use
80	HTTP	Regular (unsecured) web browsing
443	HTTPS	Secure web browsing (encrypted)
22	SSH	Secure remote login to servers
